El-Saadawi W., Badawi A., Shabbara H.M., Abou Salama U.Y. & Refai S.M., 1999. An updated list of Egyptian mosses. *Taeckholmia* 19(2): 77-96.

An updated list provides information concerning the, hitherto, known Egyptian mosses (168 taxa). Reference is made to new records (20 taxa), phytogeographical territory(ies) from which each moss has been recorded, and other relevant data.

An annex to the main list includes the excluded taxa, which are 16 entities and are either **nomina nuda**, misidentified or, hitherto, recorded from only greenhouses and gardens or from beyond Egyptian boundaries.

An appendix including 67 reference works dealing entirely or partly with Egyptian mosses is also provided.

Key words: Bryoflora, Egypt, Mosses.

Introduction:

Many works dealing entirely or partly with Egyptian mosses have appeared (see Appendix 1) since the publication of the basic list by El-Saadawi & Badawi (1977) which then included 74 taxa. Records naturally increased, and the reported number, reached at present 424 taxa: 19 hepaticas and 405 mosses. More than half the number of reported mosses, however, still requires careful investigation to reach precise identifications.

Earlier works on Egyptian mosses (all given in Appendix 1) included 16 taxa that should be excluded from the moss flora of Egypt, being misidentifications, **nomina nuda**, not collected from Egyptian territories or grow only in greenhouses and gardens. These 16 taxa are given at the end of this text.

The present account is an updated list of the Egyptian mosses, based on our present knowledge for the moss flora of Egypt. It is hoped to be a basic step towards a comprehensive future work. It includes 148 taxa from earlier publications together with 20 new records, i.e. a total of 168 entities. These 168 entities represent 139 species belonging to 44 genera, 14 families and 9 orders; all under class **Bryopsida**. All entities, except those marked with #, are represented by specimens at CAIA and/or CAI.

Received 23 June 1999. Revision accepted 20 October 1999.

Synonyms given in the present list are only those reported in the publications dealt with mosses from Egypt. The accepted names and the classification system used here are based mainly on Wijk *et al.* (1959-69); Crosby (1977, 1979), Corely *et al.* (1981), Crosby & Bauer (1981, 1983), Anderson *et al.* (1990), Herrnstadt *et al.* (1991), Crosby *et al.* (1992), Zander (1993) and Crosby & Magill (1994). Abbreviations of names of authors of plant names are as given in Brummitt & Powell (1992). The presented list includes also the phytogeographical territory(ies) from which each moss has been recorded. These phytogeographical territories (Fig.1) are partially after Täckholm (1974) and El-Hadidi & Fayed (1994/95). These territories are arranged according to date of publication for each record and are given in an abbreviated form. Explanations of these abbreviations are given in Figure 1, other abbreviations used in the list are as follows:

Eg: Egypt (unknown locality) including Sinai; E: Egypt (unknown locality) excluding Sinai; (R?): Species not certain; *: New record; #: Specimens not at CAIA and/or CAI; ♥: Collected mainly once before 1904; ☹: Not detected in any source of reference including indices.

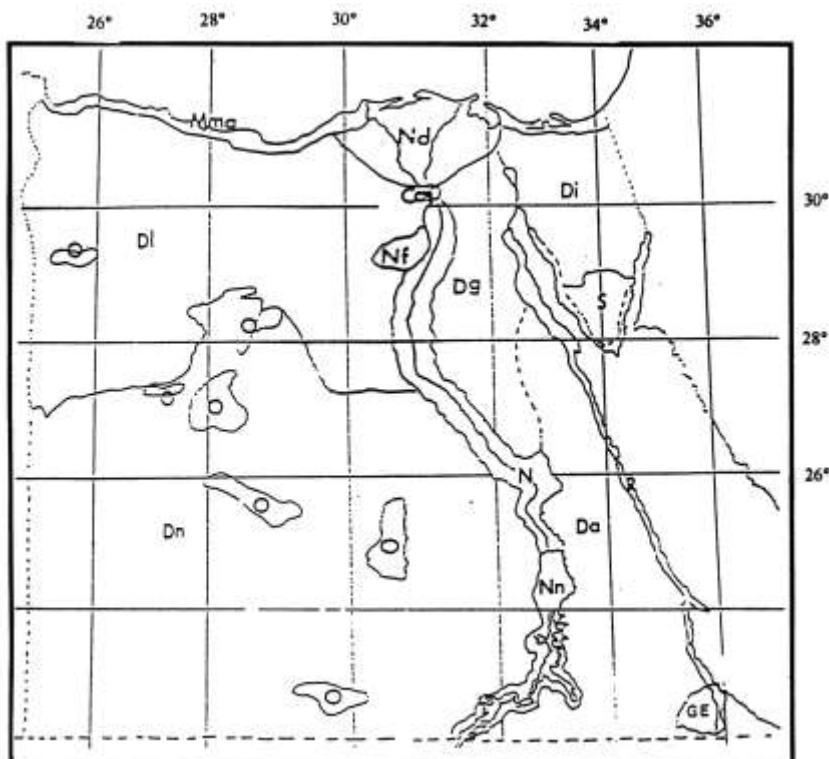

Fig. 1. Phytogeographical territories in Egypt (After Täckholm, 1974; El- Hadidi & Fayed 1994/95). Cai: Cairo area; Da: Arabian Desert; Dg: Galala Desert; Di: Isthmic Desert; Dl: Libyan Desert; Dn: Nubian Desert; GE: Gebel Elba; Mma: Western Mediterranean coastal land; Nd: Nile Delta; Nf: Nile Faiyum; Nn: Nile Nubia, from Kom-Ombo southwards to Egyptian boundaries with the Sudan including the areas now inundated by the waters of Lake Naser since 1965; Nv: Nile Valley, from Cairo- Giza to Kom- Ombo; O: Oases of Western Desert; R: Red Sea costal plains; S: Southern Sinai massive (Sinai proper i.e. relatively high mountains, south of Isthmic desert).

Excluded taxa:

a) Misidentified taxa:

Triquetrella papillata (Hook. & Wilson.) Broth. Nf (App.1; 7, 25)

b) Taxa collected from beyond Egyptian boundaries:

- ¤ *Hyophila laxitexta* Froelich, nomen nudum, GE, Sudanese territory (App.1; 38).
Hymenostomum laxirete (Broth.) Broth., GE, Sudanese territory, misidentified (App.1;
22).

c) Greenhouse and garden taxa:

- Amblystegium varium* (Hedw.) Lindb., Mma (App.1; 22, 38, 57).
Bryum atrovirnes Vill. ex Brid., Cai, Nv (App.1; 38), Cai (App.1; 22).
B. sauteri Bruch, Schimp.& W. Gumbel, Cai (App.1; 63).
Hymenostomum laxirete (Broth.) Broth., Cai misidentified (App.1; 23).
Oxystegous sp., Cai, misidentified (App.1; 23)
Pleuridium subulatum (Hedw.) Rabenh., Cai (App.1; 20); Mma (App.1; 22) .
Pohlia sp., Cai (App.1; 20).
Splachnobryum sp., Cai (App.1; 17).
¤#*Gymnostomiella laevis* Fröhlich , nomen nudum, Cai (App.1; 22, 38).

d) Nomina nuda:

- # *Barbula sickenbergeri* Müll. Hal.,Mma (App.1; 60).
Bartramia nilotica Müll. Hal. (=¤ *Philonotula nilotica*), Cai (App.1; 60)
Bryum glauculum Müll. Hal. ex Sickenb., Nv, Nn (App.1, 60)
Entostodon schweinfurthii Müll. Hal., Cai (App.1; 60)
¤#*Hypnum klenzingeri* Müll. Hal., R (App.1; 39)

In addition to the above 16 taxa Sickenberger (1901), reported
¤#*Barbula muralis* var. *obovata* Schimp. from Mariout (Mma, App. 1; 60). This
moss is either a **nomen nudum** or the author meant to say var. *obcordata* which is
a synonym of *Toutula muralis* var. *obcordata* (cf. also Ros *et al.* 1999).

Acknowledgements

The authors are grateful to Prof. RNDr. J Vana of Charles University, Praha, Czech Republic for making his valuable unpublished report, on the bryophytes of Sinai available to us, and to Prof. Dr. M. N. El-Hadidi for providing facilities in CAI. We thank also Mr. Khaled Mahmoud, of Manchester Univ. who kindly provided us with photocopies of requested papers.
