ABSTRACT. The principal aim of this paper is to investigate certain recurrence relations for \bar{H} -function. On account of general nature of \bar{H} -function, we have also obtained recurrence relations of H -function and Wright generalized hypergeometric function as special cases of our main findings.

1. INTRODUCTION AND PRELIMINARIES

In an attempt to achieve certain Feynman integrals in two different ways which arises in perturbation calculations of the equilibrium properties of a magnetic model of phase transitions, Inayat-Hussain [1, 2] investigated \bar{H} -function, which is defined as

$$\begin{aligned} \bar{H}[z] &= \bar{H}_{p,q}^{m,n}[z] = \bar{H}_{p,q}^{m,n} \left[z \middle| \begin{matrix} (a_j, A_j; \alpha_j)_{1,n}, (a_j, A_j)_{n+1,p} \\ (b_j, B_j)_{1,m}, (b_j, B_j; \beta_j)_{m+1,q} \end{matrix} \right] \\ &= \frac{1}{2\pi\omega} \int_L \chi(s) z^s ds \end{aligned} \quad (1)$$

where $\omega = \sqrt{-1}$ and

$$\chi(s) = \frac{\prod_{j=1}^m \Gamma(b_j - B_j s) \prod_{j=1}^n \Gamma(1 - a_j + A_j s)^{\alpha_j}}{\prod_{j=m+1}^q \Gamma(1 - b_j + B_j s)^{\beta_j} \prod_{j=n+1}^p \Gamma(a_j - A_j s)} \quad (2)$$

which contains fractional powers of some of the gamma functions. $L = L_{\omega\tau\infty}$ is a contour starting at the point $\tau - \omega\infty$, terminating at the point $\tau + \omega\infty$ with $\tau \in R = (-\infty, \infty)$. Here z may be real or complex but is not equal to zero and an empty product is interpreted as unity.

m, n, p, q are integers such that $1 \leq m \leq q, 0 \leq n \leq p; A_j > 0 (j = 1, \dots, p), B_j > 0 (j = 1, \dots, q), a_j (j = 1, \dots, p)$ and $b_j (j = 1, \dots, q)$ are complex numbers. The exponents $\alpha_j (j = 1, \dots, n)$ and $\beta_j (j = m + 1, \dots, q)$ may take non-integer values.

Also, from Inayat-Hussain [2], it follows that

for small values of z

$$\overline{H}_{p,q}^{m,n}[z] = o(|z|^\mu), \quad (3)$$

where

$$\mu = \min_{1 \leq j \leq m} \operatorname{Re} \left\{ \left(\frac{b_j}{B_j} \right) \right\}, \quad (4)$$

and for large values of z

$$\overline{H}_{p,q}^{m,n}[z] = o(|z|^\nu), \quad (5)$$

where

$$\nu = \max_{1 \leq j \leq n} \operatorname{Re} \left\{ \alpha_j \left(\frac{a_j - 1}{A_j} \right) \right\}. \quad (6)$$

The sufficient condition for absolute convergence of the contour integral (1) is given by Buschman and Srivastava [3] as

$$\Omega = \sum_{j=1}^m |B_j| + \sum_{j=1}^n |\alpha_j A_j| - \sum_{j=m+1}^q |\beta_j B_j| - \sum_{j=n+1}^p |A_j| > 0 \quad (7)$$

and

$$|\arg z| < \frac{1}{2}\pi\Omega. \quad (8)$$

When the exponents α_j ($j = 1, \dots, n$) = β_j ($m + 1, \dots, q$) = 1, the \overline{H} -function reduces to the familiar Fox's H -function.

The Fox's H -function is defined and represented in the following manner [4].

$$\begin{aligned} H[z] = H_{p,q}^{m,n}[z] &= H_{p,q}^{m,n} \left[z \left| \begin{matrix} (a_j, A_j)_{1,n}, (a_j, A_j)_{n+1,p} \\ (b_j, B_j)_{1,m}, (b_j, B_j)_{m+1,q} \end{matrix} \right. \right], \\ &= \frac{1}{2\pi\omega} \int_L \chi(s) z^s ds, \end{aligned} \quad (9)$$

where $\omega = \sqrt{-1}$ and

$$\chi(s) = \frac{\prod_{j=1}^m \Gamma(b_j - B_j s) \prod_{j=1}^n \Gamma(1 - a_j + A_j s)}{\prod_{j=m+1}^q \Gamma(1 - b_j + B_j s) \prod_{j=n+1}^p \Gamma(a_j - A_j s)}. \quad (10)$$

The nature of contour L of the integral (9), existence conditions of the H -function defined by (9) and other details can be found in the book Kilbas and Saigo [5]. The generalized Wright hypergeometric function [6, 7, 8] is defined by means of the series representation in the form

$$\begin{aligned} {}_p\Psi_q(z) &= {}_p\Psi_q \left[\begin{matrix} (a_p, A_p); \\ (b_q, B_q); \end{matrix} \middle| z \right] = {}_p\Psi_q \left[\begin{matrix} (a_1, A_1), \dots, (a_p, A_p); \\ (b_1, B_1), \dots, (b_q, B_q); \end{matrix} \middle| z \right], \\ &= \sum_{k=0}^{\infty} \frac{\prod_{j=1}^p \Gamma(a_j + A_j k)}{\prod_{j=1}^q \Gamma(b_j + B_j k)} \frac{z^k}{k!}, \end{aligned} \quad (11)$$

where $z \in \mathbb{C}$, $a_j (j = 1, 2, \dots, p), b_j (j = 1, 2, \dots, q) \in \mathbb{C}$, $A_j (j = 1, 2, \dots, p), B_j (j = 1, 2, \dots, q)$ are positive real numbers such that

$$1 + \sum_{j=1}^q B_j - \sum_{j=1}^p A_j \geq 0.$$

2. RECURRENCE RELATIONS OF \bar{H} -FUNCTION

In earlier work, Jain [9], Anandani [10], Goyal [11] and Raina [12] have investigated various recurrence relations of Fox's H -function. Motivated by those avenues, we have investigated some recurrence relations of \bar{H} -function. Due to general nature of \bar{H} -function, some new recurrence relations of H -function and Wright generalized hypergeometric function have also been derived from the recurrence relations of \bar{H} -function as special cases from our main findings.

Theorem 1. If $z \in \mathbb{C}$, m, n, p, q be non-negative integers, $A_j > 0 (j = 1, \dots, p)$, $B_j > 0 (j = 1, \dots, q)$, $a_j (j = 1, \dots, p)$ and $b_j (j = 1, \dots, q)$ be complex numbers then there hold the following recurrence relation

$$\begin{aligned} & \mu \bar{H}_{p,q}^{m,n} \left[z \left| \begin{array}{l} \left(\frac{1}{2} + \frac{\rho}{2} - \mu, \frac{1}{2}; 1\right), (a_j, A_j; \alpha_j)_{2,n}, (a_j, A_j)_{n+1,p-3}, \\ (\rho, 1), (b_j, B_j)_{2,m}, \\ \left(\frac{1}{2} + \frac{\rho}{2} + \mu, \frac{1}{2}\right), \left(\frac{1}{2} + \frac{\rho}{2}, \frac{1}{2}\right), \left(\frac{1}{2} + \frac{\rho}{2}, \frac{1}{2}\right) \\ (b_j, B_j; \beta_j)_{m+1,q} \end{array} \right. \right] \\ &= \bar{H}_{p,q}^{m,n} \left[z \left| \begin{array}{l} \left(\frac{1}{2} + \frac{\rho}{2} - \mu, \frac{1}{2}; 1\right), (a_j, A_j; \alpha_j)_{2,n}, (a_j, A_j)_{n+1,p-3}, \\ (\rho - 1, 1), (b_j, B_j)_{2,m}, \\ \left(-\frac{1}{2} + \frac{\rho}{2} + \mu, \frac{1}{2}\right), \left(\frac{1}{2} + \frac{\rho}{2}, \frac{1}{2}\right), \left(-\frac{1}{2} + \frac{\rho}{2}, \frac{1}{2}\right) \\ (b_j, B_j; \beta_j)_{m+1,q} \end{array} \right. \right] \\ &+ \bar{H}_{p,q}^{m,n} \left[z \left| \begin{array}{l} \left(-\frac{1}{2} + \frac{\rho}{2} - \mu, \frac{1}{2}; 1\right), (a_j, A_j; \alpha_j)_{2,n}, (a_j, A_j)_{n+1,p-3}, \\ (\rho - 1, 1), (b_j, B_j)_{2,m}, \\ \left(\frac{1}{2} + \frac{\rho}{2} + \mu, \frac{1}{2}\right), \left(\frac{1}{2} + \frac{\rho}{2}, \frac{1}{2}\right), \left(-\frac{1}{2} + \frac{\rho}{2}, \frac{1}{2}\right) \\ (b_j, B_j; \beta_j)_{m+1,q} \end{array} \right. \right] \quad (12) \end{aligned}$$

where $1 \leq n \leq p - 3$ and $1 \leq m \leq q$.

Theorem 2. If $z \in \mathbb{C}$, m, n, p, q be non-negative integers, $A_j > 0 (j = 1, \dots, p)$, $B_j > 0 (j = 1, \dots, q)$, $a_j (j = 1, \dots, p)$ and $b_j (j = 1, \dots, q)$ be complex numbers then there hold the following recurrence relation

$$\begin{aligned} & (2\mu + 1) \bar{H}_{p,q}^{m,n} \left[z \left| \begin{array}{l} (-1, 1; 1), (a_j, A_j; \alpha_j)_{2,n}, (a_j, A_j)_{n+1,p} \\ (b_j, B_j)_{1,m}, (b_j, B_j; \beta_j)_{m+1,q-2}, \left(-1 - \frac{\mu}{2}, \frac{1}{2}; 1\right), \left(-\frac{1}{2} + \frac{\mu}{2}, \frac{1}{2}; 1\right) \end{array} \right. \right] \\ &= 2(\mu + 1) \bar{H}_{p,q}^{m,n} \left[z \left| \begin{array}{l} (0, 1; 1), (a_j, A_j; \alpha_j)_{2,n}, (a_j, A_j)_{n+1,p} \\ (b_j, B_j)_{1,m}, (b_j, B_j; \beta_j)_{m+1,q-2}, \left(-1 - \frac{\mu}{2}, \frac{1}{2}; 1\right), \left(\frac{1}{2} + \frac{\mu}{2}, \frac{1}{2}; 1\right) \end{array} \right. \right] \\ &+ 2\mu \bar{H}_{p,q}^{m,n} \left[z \left| \begin{array}{l} (0, 1; 1), (a_j, A_j; \alpha_j)_{2,n}, (a_j, A_j)_{n+1,p} \\ (b_j, B_j)_{1,m}, (b_j, B_j; \beta_j)_{m+1,q-2}, \left(-\frac{\mu}{2}, \frac{1}{2}; 1\right), \left(-\frac{1}{2} + \frac{\mu}{2}, \frac{1}{2}; 1\right) \end{array} \right. \right] \quad (13) \end{aligned}$$

where $1 \leq n \leq p$ and $1 \leq m \leq q - 2$.

Theorem 3. If $z \in \mathbb{C}$, m, n, p, q be non-negative integers, $A_j > 0$ ($j = 1, \dots, p$), $B_j > 0$ ($j = 1, \dots, q$), a_j ($j = 1, \dots, p$) and b_j ($j = 1, \dots, q$) be complex numbers then there hold the following recurrence relation

Expressing \overline{H} -function occurring in L.H.S. of (20) in its well known contour integral form, we have

$$\begin{aligned}
 & \frac{\mu}{2\pi\omega} \int_L \frac{\prod_{j=2}^m \Gamma(b_j - B_j s) \prod_{j=2}^n \Gamma(1 - a_j + A_j s)^{\alpha_j}}{\prod_{j=m+1}^q \Gamma(1 - b_j + B_j s)^{\beta_j} \prod_{j=n+1}^{p-3} \Gamma(a_j - A_j s)} \\
 & \times \frac{\Gamma(\rho - s) \Gamma\{\frac{1}{2}(1 - \rho + 2\mu + s)\}}{\Gamma\{\frac{1}{2}(1 + \rho + 2\mu - s)\} \Gamma\{\frac{1}{2}(1 + \rho - s)\} \Gamma\{\frac{1}{2}(1 + \rho - s)\}} z^s ds \\
 & - \frac{1}{2\pi\omega} \int_L \frac{\prod_{j=2}^m \Gamma(b_j - B_j s) \prod_{j=2}^n \Gamma(1 - a_j + A_j s)^{\alpha_j}}{\prod_{j=m+1}^q \Gamma(1 - b_j + B_j s)^{\beta_j} \prod_{j=n+1}^{p-3} \Gamma(a_j - A_j s)} \\
 & \times \frac{\Gamma(\rho - 1 - s) \Gamma\{\frac{1}{2}(1 - \rho + 2\mu + s)\}}{\Gamma\{\frac{1}{2}(\rho - 1 + 2\mu - s)\} \Gamma\{\frac{1}{2}(1 + \rho - s)\} \Gamma\{\frac{1}{2}(\rho - 1 - s)\}} z^s ds \\

 \end{aligned}$$

now let

$$\chi(s) = \frac{\prod_{j=2}^m \Gamma(b_j - B_j s) \prod_{j=2}^n \Gamma(1 - a_j + A_j s)^{\alpha_j}}{\prod_{j=m+1}^q \Gamma(1 - b_j + B_j s)^{\beta_j} \prod_{j=n+1}^{p-3} \Gamma(a_j - A_j s)},$$

then the above expression can be written as

$$\begin{aligned} &= \frac{1}{2\pi\omega} \int_L \chi(s) \frac{\Gamma(\rho - s) \Gamma\{\frac{1}{2}(1 - \rho + 2\mu + s)\}}{\Gamma\{\frac{1}{2}(1 + \rho + 2\mu - s)\} \Gamma\{\frac{1}{2}(1 + \rho - s)\} \Gamma\{\frac{1}{2}(1 + \rho - s)\}} \\ &\quad \times \left[\mu - \frac{(-1 + \rho + 2\mu - s)(-1 + \rho - s)}{4(\rho - 1 - s)} - \frac{(1 - \rho + 2\mu + s)(-1 + \rho - s)}{4(\rho - 1 - s)} \right] z^s ds \\ &= \frac{1}{2\pi\omega} \int_L \chi(s) \frac{\Gamma(\rho - s) \Gamma\{\frac{1}{2}(1 - \rho + 2\mu + s)\}}{\Gamma\{\frac{1}{2}(1 + \rho + 2\mu - s)\} \Gamma\{\frac{1}{2}(1 + \rho - s)\} \Gamma\{\frac{1}{2}(1 + \rho - s)\}} \times 0 \times z^s ds = 0. \end{aligned}$$

Hence the recurrence relation (12) is established.

On applying Gamma function formula $\Gamma(n+1) = n\Gamma(n)$ and following similar lines of proof of recurrence relation (12), recurrence relations (13) to (19) can easily be established. We omit the details.

3. SPECIAL CASES

The following recurrence relations for the H -function are obtained if we take α_j and β_j to be equal to unity in recurrence relations (12) to (19) respectively.

Corollary 1. If $z \in \mathbb{C}$, m, n, p, q be non-negative integers, $A_j > 0$ ($j = 1, \dots, p$), $B_j > 0$ ($j = 1, \dots, q$), a_j ($j = 1, \dots, p$) and b_j ($j = 1, \dots, q$) be complex numbers then there hold the following recurrence relation

$$\begin{aligned} &\mu H_{p,q}^{m,n} \left[z \left| \begin{array}{l} \left(\frac{1}{2} + \frac{\rho}{2} - \mu, \frac{1}{2}\right), (a_j, A_j)_{2,n}, (a_j, A_j)_{n+1,p-3}, \\ (\rho, 1), (b_j, B_j)_{2,m}, \\ \left(\frac{1}{2} + \frac{\rho}{2} + \mu, \frac{1}{2}\right), \left(\frac{1}{2} + \frac{\rho}{2}, \frac{1}{2}\right), \left(\frac{1}{2} + \frac{\rho}{2}, \frac{1}{2}\right) \\ (b_j, B_j)_{m+1,q} \end{array} \right. \right] \\ &= H_{p,q}^{m,n} \left[z \left| \begin{array}{l} \left(\frac{1}{2} + \frac{\rho}{2} - \mu, \frac{1}{2}\right), (a_j, A_j)_{2,n}, (a_j, A_j)_{n+1,p-3}, \\ (\rho - 1, 1), (b_j, B_j)_{2,m}, \\ \left(-\frac{1}{2} + \frac{\rho}{2} + \mu, \frac{1}{2}\right), \left(\frac{1}{2} + \frac{\rho}{2}, \frac{1}{2}\right), \left(-\frac{1}{2} + \frac{\rho}{2}, \frac{1}{2}\right) \\ (b_j, B_j)_{m+1,q} \end{array} \right. \right] \\ &+ H_{p,q}^{m,n} \left[z \left| \begin{array}{l} \left(-\frac{1}{2} + \frac{\rho}{2} - \mu, \frac{1}{2}\right), (a_j, A_j)_{2,n}, (a_j, A_j)_{n+1,p-3}, \\ (\rho - 1, 1), (b_j, B_j)_{2,m}, \\ \left(\frac{1}{2} + \frac{\rho}{2} + \mu, \frac{1}{2}\right), \left(\frac{1}{2} + \frac{\rho}{2}, \frac{1}{2}\right), \left(-\frac{1}{2} + \frac{\rho}{2}, \frac{1}{2}\right) \\ (b_j, B_j)_{m+1,q} \end{array} \right. \right] \end{aligned} \tag{21}$$
