Security System is essential for part for safe Places. This Project aims to develop a low-cost and intelligent security system. The main goal of this project is to design and implement a security system based on GSM (global system for mobile communication) and RFID (radio frequency identification) and Camera technology which can be organized in bank, secured offices and homes. Where crime becomes increasing and everyone wants to secure they asset at their places. In that situation user must have system with advance technology so person do not worry when getting away from their places and properties
